METHODOLOGY, SAMPLE FRAME AND DATA COLLECTION TECHNIQUES

This poll was commissioned by WHTM-TV/ABC27 and conducted by Susquehanna Polling and Research, Inc.¹ Interviews were conducted October 28-29 with 446 likely general election voters in Pa. Congressional District 8. Interviews were collected via automated/IVR response polling. Automated polling software relies on a pre-recorded voice expert to ensure all respondents hear survey questions in the exact same way and with identical voice inflection, thereby reducing any incidence of unintentional interviewer bias sometimes common in live agent interviews.

The sample frame is based on a universe of voters who have past vote history in one of the last four general elections (i.e., G17, G16, G15 and/or G14, and new registrants since G2017). Interviews are closely monitored to ensure a representative sample of projected likely voters is achieved based on party registration, geography, gender, age and other demographics; results are sometimes statistically weighted.

The margin of error for a sample size of 446 interviews is +/-4.6% at the 95% confidence level.
